

Notre Dame

AUTOMOBILE DESIGNING, A TRADITION IN THE EXNER FAMILY

Virgil Exner, Sr. (left) is Vice President and Director of Styling for the Chrysler Corporation. He and his son, Virgil, Jr. are Notre Dame alumni. Virgil, Jr. designed and built this sleek sports car while studying for his Master's degree at N.D.

Looking out over their tree-lined and usually quiet streets some long-time residents of South Bend may have wondered if a time machine wasn't working in reverse — taking them back some 30 years.

Cause for this reminiscent head-scratching was a lean, lanky youth with a thin, rather intense face. He had a shock of dark and somewhat unruly hair capping a pair of equally dark, piercing eyes.

He walked with a casual rolling gait akin to a sailor's, except that he always seemed to be in more of a hurry than a sailor would be. He usually had a sketch pad or several books under his left arm, but both hands were stuffed into his trouser or jacket pockets. If you caught his eyes as you passed him, he seemed to be at least a million miles away in thought.

On occasion, this young man backed a small, partially-completed sports car chassis out of a garage in the residential section and drove it unobtrusively as possible over to the Notre Dame campus. The trips were not as unobtrusive as they might have been, however, since the sports car had only a "token" muffler and the brakes were still to be installed.

The young man was Virgil M. Exner, Jr., a graduate

student in fine arts at Notre Dame. He wants to become an automotive stylist.

Just about 28 years ago, an amazingly similar-looking young chap was seen around South Bend. He had the same intense, far-away look in his eye and he usually had a sketch pad under his arm and his hands in his pockets. Instead of a sports car, however, his pride and joy was a "slightly customized" 1921 Model T Ford. Fastened to the radiator shell of the Model T was the emblem of a far more expensive Duesenberg, and on the side of the car the young Notre Dame student had attached the nameplate of Le Baron, the firm of custom body craftsmen whose work he so admired.

Also setting the old four-door touring car apart from the thousands of other black ones then on the road was some fine free-hand gold striping around the doors and "belt line" of the car.

The owner of the Model T, who was in his second year at Notre Dame in 1929, was Virgil M. Exner. Even then he knew that he wanted to enter a field which at that time was in its infancy — automotive styling. Today, at 49, he is a vice-president and director of styling at Chrysler Corporation, a man who has come to be recog-

The white fiber glass body is mounted on a Simca chassis.

nized as one of the nation's top automotive designers.

Exner is credited with developing a new approach to automotive design, as first embodied in the company's 1955 "Forward Look" cars and more recently in the newly-styled high-finned "Flight Sweep" line for 1959.

The similarity of characteristics, speech, facial expression and other mannerisms between Exner — father and son — is striking.

Virgil, Jr., was born in South Bend on April 17, 1933 (while his father was employed as a designer of car catalogs). Virgil, Jr., completed his high school education at Cranbrook Academy in Bloomfield Hills, Michigan, and entered Notre Dame in 1951.

From February until June in 1955, Virgil, Jr., studied fine arts in Europe at the Kunst Akademie in Vienna.

Young Exner was awarded Notre Dame's Jacques Gold Medal in 1956 for his undergraduate thesis which was required for a bachelor's degree in fine arts. It was the first time that an automotive styling student had received the Gold Medal which previously had always gone to a painting or sculptor fine arts student. The medal is named after Emil Jacques, a former head of the art department at Notre Dame.

As his undergraduate thesis Virgil, Jr., had designed a completely original sports car to be built on the chassis of a 1950 (French) Simca. The undergraduate thesis took him through the development of a 1/4-scale fiberglass model of the sports car-to-be.

Prior to that he had developed complete drawings and specifications and had made a 1/4-scale clay model.

By August, 1957, he had completed a full-scale clay model of the car. At that time he received his master's degree from the College of Liberal and Fine Arts. Leaving the car and scale models at the University, he departed Notre Dame for Air Force summer camp, Langley Air Force Base, Va., where he was commissioned a second lieutenant. He had been active in Notre Dame's Air Force R.O.T.C. for four years.

In October of that year he returned to South Bend and worked for five months in the styling department of Studebaker-Packard. During the evening and on week

"Laying up" of the 15 separate laminated fiber glass body panels was a slow process. Virgil Jr. applies resin to a side body panel.

ends he completed the painstaking process of making full-scale plaster molds from the clay model of his car in the University's styling studio.

From March until midsummer, when he was called to active duty at Shepard Air Force Base, Texas, he built up the laminated fiberglass body panels of the car (working from the plaster molds). At the invitation of Gene Casaroll, president of Dual Motors, Inc. (manufacturer of Dual-Ghia sports cars), young Virgil undertook this work in the east-side Detroit shop of Dual Motors. The car still needed final touches, body sanding and painting when he left for Texas in July.

In October of 1958, Virgil was assigned to 13 months' duty in Korea, but was granted a one-month leave en route, during which time he finished the car. Fully completed, it now has a plexiglass bubble canopy over the passenger compartment and is enameled all white, with a broad royal blue stripe running the length of the car, atop the hood and rear deck area. He has stored it in Detroit for the duration of his overseas stint.

Virgil sometimes refers to the car as the "United Nations Special," since he has parts in it from at least five

A plexi-glass bubble canopy covers the passenger compartment of the sports car designed by Virgil Exner, Jr.

Virgil Jr. confers with Professor Frederick S. Beckman, who teaches automotive styling in Notre Dame's College of Arts and Letters.

Virgil Sr. discussed concepts of automotive styling with students who are specializing in this field while studying in the Notre Dame design studio provided by the Chrysler Corporation.

countries — the chassis and radiator are Simca (French); the steering wheel is by Nardi (Italy) and it has a German Volkswagen gasoline tank. The steering system and universal joint are British and it still is to receive a Judson (American) supercharger.

The Simca has a 96-inch wheel base, 10-inch Alfa brake drums, a 12-volt ignition system with lightweight aircraft battery. The four-cylinder Simca-Fiat engine has a displacement of 1220 cc's (76 cubic inches). The stock engine was rated at 45 horsepower, but young Virgil estimates it will be approximately 80 when supercharged. The chassis weighs 1350 lbs. (he sold the body of the four-door Simca which used to weigh 2,060 pounds). The tire size is 5.50 x 15 with knock-off wheel hubs.

Virgil, Jr.'s instructor at Notre Dame was Associate Professor Frederick S. Beckman of the Department of Fine Arts. Professor Beckman is still in the process of developing the automotive styling course, which he has been working on for the past several years, and soon hopes to have it designated as "Transportation Design" — since he plans to broaden the design training into other fields besides passenger cars.

The Notre Dame faculty followed the development of Virgil's sports car with a great deal of interest. Following the annual student auto show last year, Virgil was driving the chassis back over to O'Shaughnessy Hall (where the styling studio is located on the top floor). He chanced to pass under the open window of a building where Father Sheedy, dean of the College of Arts and Letters was conducting a class. Father Sheedy later called Virgil and asked, "Didn't I hear that thing running around the campus the other day?" Virgil assured him that it probably was since he still was having "a little muffler trouble." Father Sheedy replied: "Well, I want a ride just as soon as it's ready!" He was one of the first to try out the new sports car when it was completed, and Virgil took it back to Notre Dame in November for a "trial run."

One of Virgil's greatest concerns is that, if he is able to pursue a career in automotive styling — as he hopes to after his Air Force duty — that he be recognized on a basis of *his own* talent. He undoubtedly absorbed some of his feeling and approach to design from his internationally-recognized father — the fondness for the European flavor, and the ability to combine it skillfully with a truly American flair, and the belief that a car should look like a product that was designed to be driven and enjoyed. Still, the two Exners already have differences of opinion . . . for example, the fins on Virgil, Jr.'s sports car rise vertically and taper inward toward the center of the car as they approach the rear. The fins on most of the cars his father has designed are inclined slightly outward. However, Virgil, Jr., maintains that "my way is a lot more functional."

The ideas and designs of 'automobile stylist' Exner, Jr., will have an impact on the American public in the not too distant future — in much the same manner as those of his famous father, Virgil, Sr.

NOTRE DAME VOL. 12, NO. 1, SPRING, 1959

If there is any single topic that has captured the attention of our times, it is education. Everybody today has an opinion on what is happening or should be happening to education in America. Even the cold war has taken an educational turn, so that the remarkable assault of space by Sputniks and Explorers has led to an unprecedented interpretation of these accomplishments in terms of the Soviet and American educational systems. In the underdeveloped countries of Asia and Africa, education is being viewed as the key to the Pandora box of rising expectations.

In our own country, the debate has taken several courses. There have been lively discussions on the content of American education: how poorly science and mathematics are taught, if at all; whether or not religion and moral truths have any place in the curriculum; the seeming conflict between technical or vocational education that prepares the student to do some specific thing, and humanistic or liberal or general education that purports to educate man as man. Then there have been the embarrassing questions: why so many teachers have been taught *how* to teach without learning *what* they are going to teach; why we spend more on comic books than on textbooks; why our teachers are paid and esteemed so much less than our entertainers; why so many of our most talented high school students receive no college education at all. Through all of this discussion there has been a rising emphasis on quality of performance. It has been rightly said that what happens to education happens to America.

It was inevitable that Catholic edu-

cation should have become involved in this discussion. Nowhere in the world does there exist a Catholic educational system as extensive as in America. Never before in the history of the world has the Church in a single country undertaken to educate formally as many students as are educated today under Catholic auspices in the United States.

Nothing this large can exist without being highly visible to the world about it. Nothing this significant can continue without friend and enemy alike searching for the depth of its significance. And certainly, nothing this widespread can increase and multiply as it should without a continual consciousness of its special contribution, its inspirational motivation, and the inner dynamic spirit that must guide its organic growth.

The relevance of all this to Notre Dame is rather obvious. More and more, we are being asked what specific contribution our alumni are making to solve the great problems that face us today. The public generally is very conscious of the quality of our performance as a University, the selection of our students, the excellence of our faculty and our academic programs. If any clear conclusion can be drawn from the misunderstandings and the emotional reactions attending the changing of football coaches, it is this: Americans generally want Notre Dame to be a great Academic Institution, with high ideals and high performance. They want nothing to stand in the way of this. Neither do we.

Indianapolis, Ind.

LAW SCHOOL SPONSORS PUBLIC SERVICE SYMPOSIUM

**SPEAKERS INCLUDE FIVE OUTSTANDING ATTORNEYS
REPRESENTING FEDERAL, STATE AND LOCAL GOVERNMENTS**

By Stephen Bogardo

Participants in the symposium include (left to right): Hugh Sherer, Murray Seasongood, Thomas G. Meeker, G. W. Snyder and Dean Joseph O'Meara, Jr.

The author is a candidate for a Master's degree in History at Notre Dame. He received a bachelor's degree from St. Peter's College, Jersey City, N.J. Mr. Bogardo's home is in Secaucus, N.J.

Five prominent attorneys representing federal, state and local governments recently participated in a Notre Dame Law School symposium on "The Public Service Opportunities and Responsibilities of Lawyers." The symposium is intended "to help develop a tradition of public service in the Notre Dame Law School," according to Dean Joseph O'Meara.

Speakers included Oscar H. Davis, first assistant in the office of the Solicitor General, Washington, D.C.; Thomas G. Meeker, general counsel of the Securities and Exchange Commission, Washington, D.C.; Murray Seasongood, former mayor of Cincinnati, Ohio; Hugh Sherer, chief counsel, office of the Attorney General, Columbus, Ohio; and G. W. Snyder, assistant regional commissioner, appellate, for the Cincinnati region of the Internal Revenue Service.

Davis and Meeker discussed the opportunities and responsibilities of career public service in the federal government. Snyder approached the subject from the point of view of a regional federal official not situated in Washington. Sherer described public service challenges in state government, and Seasongood explored the lawyer's opportunities of public service in the local community.

All agreed that government lawyers have responsibilities commensurate with the benefits they receive. Their job is to serve their fellow citizens, the speakers emphasized, and in so doing they must submerge personal interests to insure justice.

For the young lawyer fresh from his state bar examinations, government work has much to offer. Among its attractions: a wide range of rewarding jobs, the experience needed to enter private practice, and an adequate salary for performing a public service.

Seasongood pointed out that "new and fascinating" legal problems have arisen in community development during recent years as expansion-minded cities have gradually broken away from "straight-jacket restraints" imposed by state legislatures.

Modern ideas in municipal operation and planning, the ex-mayor claimed, have created many new posts for talented lawyers and lessened the importance of political party affiliation.

Sherer said the attorney general's office provided the "greatest challenge" for young lawyers. Newcomers unable to assume a full share of the department's workload are transferred or asked to resign, he explained.

Although admitting the election of a new attorney general often ends the public careers of his predecessor's subordinates, Sherer noted the job furnished the practical experience needed to make the shift to private practice.

Davis emphasized that federal government attorneys must always keep in mind the national welfare. "The government wins its case only when justice is done," he remarked. "And consequently its lawyers have strong obligations not to be unfair or inflammatory."

Meeker expressed the belief that federal service generally offered attorneys above-normal opportunities to exercise individual responsibility and initiative, thus enabling them to readily develop their professional skills.

Since the government has virtually every type of practice — litigation, corporate problems, taxation, etc., — a lawyer's legal horizon is unlimited, Meeker said. "The chance for public service, combined with the challenge of a great variety of complex legal problems . . . is more than enough to excite enthusiasm."

Snyder disclosed that the Internal Revenue Service has a continuing demand for promising attorneys with accounting backgrounds. In this work, he pointed out, "the compensation standards are good (\$4,980 per year after a six-month training period) and there are excellent opportunities for advancement."

Lawyers entering the tax-collecting field serve their country in a unique manner, the commissioner added, "the effectiveness of (America's) defense depends in a large measure on the power and ability of our government to raise revenue by taxation; this is essential to the maintenance of our American way of life."

ARE YOU FAIR TO JEWS?

Differences Can Be Transmuted Into Understanding And Brotherhood

The author heads a commission of the National Conference of Christians and Jews. He is nationally-known as a writer and as a speaker. Father O'Brien has been at Notre Dame since 1940 and has previously contributed articles to this magazine.

By Rev. John A. O'Brien, Ph.D.

The late Roger W. Straus (left) was co-founder of the National Conference of Christians and Jews and for twenty-nine years he served as co-chairman of the NCCJ. Mr. Straus contributed \$1,000,000 to the endowment of this organization.

Henry Ford II became president of the Ford Motor Company in 1945. The Ford Motor Company Fund gave \$1,000,000 for the establishment of the Building for Brotherhood which now houses the National Conference of Christians and Jews in New York.

No nation in the world has a population with such enormous differences of race, color and faith as the United States. Here one finds people from every land and of every faith under the sun. This endless variety has given to our culture a richness unparalleled in history: it constitutes the unique genius and the distinctive glory of America, and has compelled the admiration of the whole civilized world. In the mighty symphony of American life the immigrant catches echoes of the mores, thought, aspirations and dreams of his native land and speedily finds himself at home among us.

Learning to live together means learning not only to feel at ease with people who, while devoted to America and its ideals, are of different racial origins and religious faiths, but also to respect those differences. This calls for tolerance, mutual esteem, understanding, good will and even brotherhood among all the multitudinous ethnic and religious groups making up our cosmopolitan society.

The problem is not an easy one: its solution goes against the grain of instinctive feeling. It calls for clear thinking, self-discipline and a respect for the sanctity of the human personality with its inevitable differences: the unfailing mark of a truly civilized person.

Staining the annals of our history are the waves of organized bigotry which periodically sweep across our land. Notorious among these were the Nativist movement of the 1830's, the Know-Nothing campaign of the 1850's, the Loyalty League, the original Ku Klux Klan and allied movements of the post-Civil War period, the American Protective Association of the 1890's, the revived Ku Klux Klan after World War I and the anti-Semitism of the 1930's.

Foremost in seeking to eradicate racial hatred and religious prejudice is the National Conference of Chris-

tians and Jews. Founded in 1928 on the initiative of Charles Evans Hughes, Newton S. Baker, S. Parkes Cadman and other distinguished Americans, the Conference seeks to promote justice, amity and understanding among citizens of all faiths. It endeavors to analyze, moderate and ultimately eliminate intergroup prejudices, which disfigure and distort religious, business, social and political relations, with a view to the establishment of friendly human relationships.

Along with Dr. John Sutherland Bonnell, pastor of the Fifth Avenue Presbyterian Church of New York, and Rabbi Maurice N. Eisendrath, President of the Union of American Hebrew Congregations, I have been co-chairman of the Conference's commission on religious organizations for many years. In that capacity I have traveled thousands of miles, attended innumerable meetings and listened to lengthy discussion of the causes of racial and religious antagonism and of the means of eradicating them. Out of those years of experience have emerged three simple conclusions which seem to be of widespread interest and far-reaching significance.

First. No single group, racial or religious, should have to "go it alone." It should have allies to present its case

BOSTON (UPI)—The Jewish Advocate today named Richard Cardinal Cushing of Boston as "man of the year."

The Jewish newspaper hailed the Roman Catholic prelate "as a churchman . . . as an orator . . . (and) as an administrator." It cited his work for schools and hospitals.

The citation emphasized the cardinal's "forthright statement that there is nothing in Catholic doctrine that should adversely affect the attitude of the Christian towards Jews."

objectively and fairly when it is misrepresented and misunderstood.

Second. Most antagonisms and prejudices spring from misconceptions of the other group's beliefs, motives and purposes. This is particularly true of religious animosity. Upon investigation it is found to be directed not against the actual belief and practice of people of a different religion but against the misconceptions of them which exist in our minds. Hence most of us war against caricatures, ghosts that haunt our imagination and bats in our mental belfries.

Third. The remedy is to correct the misconceptions in an objective and friendly manner, to promote wider and better understanding between members of different faiths, and to work together on all matters affecting the welfare of the community, state and nation.

Let us now scrutinize the causes of suspicion, distrust and prejudice against Jews. Let us see if they are not largely traceable to misunderstandings and misconceptions.

What then are some of the more common charges against Jews? They control Wall Street, it is alleged, and exercise an undue economic influence in the United States. Similar charges were made by the Nazis as a simple prelude to the confiscation of Jewish possessions

throughout Germany.

What are the facts? *Fortune*, a non-Jewish magazine, made a painstaking investigation of the economic status of Jews in this country. The findings disclosed that Jewish dominance of the American economy was a pure myth. "A vast continent of heavy industry and finance may be staked out," reported *Fortune*, "in which Jewish participation is incidental or non-existent. . . . The Jews are so far from controlling the most characteristic of present-day American activities that they are hardly represented in them at all."

Jews, it is charged, control the press, movies, radio, television and theater and thus unduly influence American public opinion. How different are the facts? The *International Yearbook of Editor and Publisher* shows that only 3½ per cent of the daily newspapers are owned or controlled by Jews, while only three general magazines are classified as under Jewish control.

True, Jews are well represented in the movies, radio, television and theater business, in which they have demonstrated marked talent and ability. But the acceptance of movies, shows, radio and television programs is determined not by the producers but by the American public, in which Jews constitute but a tiny fraction.

Thus all the basic charges repeated with endless variations against the Jews of America are seen to be without foundation in fact. They are based upon misconceptions and rumors: upon investigation the labels so often pinned on Jews prove to be libels and the charges turn out to be fabrications and myths.

When I was the chaplain of the Catholic students at the University of Illinois, Rabbi Frankel confided to our Religious Workers' Association that Jewish students were finding difficulty in getting lodgings in homes near the campus. At the suggestion of a big-hearted Methodist minister, Rev. James C. Baker, now a bishop, chaplains of all faiths appealed to their congregations to end such discrimination and to welcome Jewish students into their homes. The response was as immediate as it was overwhelming.

Brandeis University, presided over by my old friend, Dr. Abram Sachar, is Jewish-sponsored but non-sectarian. When it invited Archbishop Cushing to bless its new Bethlehem Chapel for the use of its Catholic students, he readily accepted. Immediately a splinter group of fanatical Jew-haters raised a frenzied hue and cry of protest. Ignoring their efforts at intimidation the great archbishop, whose broad human sympathy and unfailing kindness have won the hearts of all Boston, went to the campus, blessed the chapel and offered the first Mass.

In America we can transform our differences into opportunities for growth in tolerance, understanding and brotherhood and thus enrich and deepen our spiritual life. When a grain of sand gets lodged in an oyster, instead of vainly brooding over the irritation, the mollusk transforms the grain into the most precious thing within its power — a shining pearl.

So can we transmute our differences into the shining pearls of understanding and brotherhood: the precious jewels of the spirit. Paraphrasing the title of a book popular a few decades ago, "Live Alone and Like It," we in America can live *together* and *like* it.

1958

REPORT

OF THE NOTRE DAME FOUNDATION

Generous contributions from individuals, corporations, foundations and government total more than \$3,000,000 for 1958.

String and band instrumental training classes were organized for parochial school children by Dr. Biondo. During the University's Summer School session, these youngsters form a 'demonstration class' for graduate students.

By C. A. BIONDO

The Music Department of the University of Notre Dame has, during the past five years, extended its contribution to instrumental music development not only at the University itself, but also in the South Bend-Mishawaka community and on the national scene. Its desire to contribute further to this relatively new field in Catholic education received an impetus through a questionnaire distributed by this writer to selected Catholic High Schools across the nation in an effort to ascertain the degree and type of instrumental training in the parochial schools. Returns from these questionnaires were so appalling that

it was immediately resolved to do something about eliminating this significant deficiency.

The South Bend parochial schools were organized as a 'proving ground' in string and band instrumental training programs. The best qualified upperclassmen of the Music Department volunteered to serve, so that each would have one or two schools to instruct, at a nominal fee, after taking appropriate courses in methods and techniques. Currently eight schools are participating in the program with two string and two band teachers doing
(continued on page 16)

The Per Musica Society, directed by Dr. Biondo, is a professional chamber group sponsored by Notre Dame and St. Mary's College.

The Maritain Center

A center for philosophical research honoring Jacques Maritain, celebrated Thomist, has been established at Notre Dame. His writings will be systematically indexed and catalogued at the Maritain Center. In a statement Rev. Theodore M. Hesburgh, C.S.C., president, predicted that the new University unit will become a place of "significant philosophical activity and publication." It will also serve, he said, as a kind of international clearing house for the students and friends of Maritain and his work.

It was also announced that Dr. Joseph W. Evans, associate professor of philosophy, has been appointed director of the new Maritain Center. Associated with him will be Rev. Leo R. Ward, C.S.C., professor of philosophy, and Frank L. Keegan, assistant professor in the University's General Program of Liberal Education. A board of consultants, composed of both American and European scholars, will be named later.

Maritain, now professor emeritus of philosophy at Princeton University, has lectured regularly at Notre Dame since 1948. Regarded as one of the great minds of our day, he is a pre-eminent interpreter of the philosophy of St. Thomas Aquinas. He is the author of more than fifty philosophical works, and he has contributed countless articles to the leading philosophical journals of the world. His latest book, *Reflections on America*, is a non-technical work which has received high praise from American critics for its remarkably acute and sympathetic insights into American life. He is currently working on a two-volume study in moral philosophy.

In addition to his long associations with Notre Dame and Princeton, Maritain has also taught at the Catholic Institute of Paris, the Pontifical Institute of Mediaeval Studies in Toronto, Columbia University, and the Committee on Social Thought in the University of Chicago. From 1945 to 1948 he was French ambassador to the Vatican. He also served as president of the French delegation to the second international conference of UNESCO at Mexico City in November, 1947. His inaugural address on that occasion on "The Possibilities for Cooperation in a Divided World" is one of his most influential contributions to social and political philosophy.

Maritain's first book, *La Philosophie Bergsonienne*, was published in Paris in 1914. Among his major works are *The Degrees of Knowledge*, *A Preface to Metaphysics*, *Existence and the Existent*, *Science and Wisdom*, *Art and Scholasticism*, *Creative Intuition in Art and Poetry*, *True Humanism*, *The Person and the Common Good*, *Man and the State*, and *On the Philosophy of History*.

Professor Evans and his associates at Notre Dame believe that Maritain has much to give to the modern world. They see him as having to a pre-eminent degree what contemporary man, for all his grandeur, seems to be sadly lacking — the sense of being and the sense of love. Maritain, they feel, is a man "so admirably attentive to the real, a man who goes beyond phenomena and signs, a man who really comes to grips with the deepest dimensions of things, a man who distinguishes in order to unite, in short, a man who really sees." There is in Maritain, Professor Evans says, "a rich and far-flung mine of challenging insights, illuminating distinctions, and strikingly new avenues of thought. The Maritain Center," he explains, "will strive to put special emphasis on the study of these new philosophical ideas. Any living and creative thought, no matter how well formed and articulated its expression may be, has need ceaselessly to grow. We would like to think that our humble efforts will assist Jacques Maritain's thought to take root and grow in many minds of this and future generations."

But the men associated with the new Maritain Center would also endeavor to learn, and to have others learn, from Maritain's "profound sense of love." This sense of love, they say, has touched and stirred people in every walk of life. What, they ask, are the sources of such a love? What are its implications for intellectual life itself, for social and political life? What can we learn from such an "apostle of love?" What can we learn from a man who wrote, in his well-known *Letter to Jean Cocteau*:

"Our business is to find the positive in all things; to use what is true less to strike than to cure. There is so little love in the world; men's hearts are so cold, so frozen, even in people who are right — the only ones who could help the others. One must have a hard mind and a meek heart. Not counting soft minds with dry hearts, the world is almost entirely made up of hard minds with dry hearts and meek hearts with soft minds."

Professor Maritain (center) confers with (L. to R.) Victor Schaefer, Director of the University Library; Prof. Joseph Evans, Director of the Maritain Center; Rev. Herman Reith, C.S.C., head of the Philosophy Department; and Professor Frank Keegan, staff member of the new Center.

Music Development

(continued from page 13)

the instructing. Each school has its program, and they participate in a May festival. During the University Summer School courses, the youngsters form a 'demonstration' group for graduate students. It culminates in a concert-demonstration for pupils and graduate students of the University as well as interested townspeople. Notes on our experience are made available to Catholic laymen and clergy to help them start or further develop their own instrumental programs.

On a more advanced level a natural path of development for these young instrumentalists is into the orchestra and band of St. Joseph High School, South Bend, and perhaps eventually, the recently organized Notre Dame-St. Mary's student orchestra, or the popular Notre Dame Band. It is felt that there now exist enough instrumental organizations to meet the needs and abilities of young people of all ages and talents.

Most significant in this respect one of the developments has been the newly organized Orchestra of the Per Musica Society, a professional chamber group of thirty-two selected players from the locality and outlying districts. Sponsored by Notre Dame and St. Mary's College, and aided by the Trust Fund of the American Federation

The author has been a member of the Notre Dame faculty since 1947. He was educated at Potsdam State Teachers College, Columbia Teachers College and the Chicago Musical College. Professor Biondo received a doctorate in music education in 1950 and has written numerous articles in various publications. He is a veteran of World War II and was discharged as a Lt.-Commander from the U. S. Navy.

of Musicians, it is capable of performing professional concerts of the highest order. These musicians, for example, play such difficult compositions as that of the Baroque and Modern eras. Flexibility of style and chamber instrumentation is possible inasmuch as the orchestra is often divided into miscellaneous smaller ensembles to perform seldom heard works that deserve more recognition. As a matter of fact, it was for this organization that Rev. Carl Hager, C.S.C., head of the Music Department, wrote an overture which was received with a tremendous ovation at its initial performance.

Plans for further expansion are underway to reach more schools and more youngsters in the local community, as well as on the national scene, and to improve conditions in the instrumental training program in Catholic education generally.

FINANCE AND INDUSTRY FORUM

(OPEN TO THE PUBLIC)

SATURDAY, APRIL 25, 1959 • 10 a.m. - 5 p.m.

LAW AUDITORIUM, UNIVERSITY OF NOTRE DAME CAMPUS

One day opportunity for . . .

- **Corporate Executives**
- **Attorneys**
- **Certified Public Accountants**
- **Trust Officers**
- **Investment Counselors**
- **Foundation Representatives**
- **Life Underwriters**
- **And other interested persons**

who are interested in the following pertinent topics,

A general survey of the impact of income and estate taxes upon the wealth and well-being of our country

A discussion on the use of trusts as an assistance in saving tax dollars for the education of children and for family security

The saving of taxes through the building of estates among family members and the use of wills

Various forms of deferred compensation and their effective use in building future security

And other vital material.

The nation's outstanding experts in the field of taxation will be present to participate in panel discussions, including:

- ★ **Rene A. Wormser**, attorney, New York City, authority in estate planning;
- ★ **William J. Casey**, attorney, New York City, Chairman, Board of Editors of the Institute for Business Planning;
- ★ **James F. Thornburg**, attorney, South Bend, Ind., estate planning and federal taxation specialist;
- ★ **Robert J. Lawthers**, Boston, Mass., Director of Benefits and Pension Business of New England Mutual Life Insurance Co.;
- ★ **William E. Murray**, attorney, New York City, author of "The Taxation of Trusts and Estates";
- ★ **Carbery O'Shea**, attorney, New York City, prominent tax consultant.

Registration for the entire program plus luncheon:
\$15 per person
Reservations should be sent to: Finance and Industry Forum, Box 555, Notre Dame, Indiana.

Please make checks or money orders payable to the University of Notre Dame

Corporations and Foundations Aid Higher Education (at Notre Dame)

Four hundred and fifty-three leaders in business, industry and foundations generously contributed \$769,924 to the University of Notre Dame in 1958. These gifts were in the form of research, scholarships, fellowships and direct subsidies. Three hundred and thirty-eight donations were repeated from the previous year while 115 were new gifts.

RI

Notre Dame

DURING the next ten years the quest for new knowledge in the natural sciences, the humanities, law, engineering and the social sciences forms an integral part of Notre Dame's \$66.6 million program. The University will need a minimum of \$11,000,000 to continue this vital field of education. It is hoped that contributions from industry, government, foundations and individuals will provide the necessary means to achieve the goal. At the present time scientific investigations are concerned with the study of heart disease and cancer, with tooth decay and radiation sickness, the ways of resisting common colds, and discoveries in aeronautics, electronics and the application of nuclear fission to industrial uses. All of these pursuits for scientific data are directly or indirectly related to the welfare of mankind.

The complete program for the ensuing decade is as follows:

Endowment for Increased Faculty	
Salaries	\$27,000,000
Contributions for Research	\$11,000,000
Student Aid	\$ 5,000,000
Special Funds for Administrative Purposes	\$ 5,000,000
New Buildings	\$18,600,000

TOTAL \$66,600,000
